

Discussion Guide

This discussion guide, along with our Patient Resource Guide, can be used to assist you in a conversation with your healthcare professional to determine if DecisionDx®-SCC test is right for you.

DecisionDx-SCC is a genomic test that looks at the tumor biology of your squamous cell carcinoma (SCC) of the skin to better understand the risk of your cancer spreading to another part of your body.

Personalized test results can help you and your doctor make decisions about:

Treatment and management plan

Follow-up appointments with your dermatologist

Additional visits with other specialties (referrals)

About SCC

- SCC occurs when the squamous cells of the skin are damaged and begin to grow abnormally
- SCC is the second most common skin cancer, after basal cell carcinoma
- If the risk of SCC spreading is identified early, it is often very treatable

About the DecisionDx-SCC test

- Patients diagnosed with SCC and one or more risk factors are eligible for testing
- Test results provide an individualized and personalized assessment for your tumor's risk of spreading to other parts of your body (low, moderate, or high risk)
- The DecisionDx-SCC test results can help guide critical treatment and management decisions

Notes

How can DecisionDx-SCC be beneficial for me?

What do the test results mean?

How can this test be used for my treatment and management decisions?

Additional Notes:

Castle Biosciences is committed to providing high-quality molecular testing to all patients. We do not want financial concerns to be a barrier to you accessing critical healthcare information. We will work with all insurance providers, including Medicare, Medicaid, commercial insurers, and Veterans Affairs (VA), to secure payment coverage for our testing. For those who may need additional assistance with their Castle test, we offer a comprehensive patient assistance program for all patients.
